Instructions for WP - Volatiles

SAMPLE DESCRIPTION

- Provided as a 1.2 mL concentrate in methanol flame sealed in a 2 mL amber ampoule.
- The concentrate should be stored at 4±2°C.

GENERAL INFORMATION

- The concentrate must be diluted prior to analysis.
- Store any remaining standard at 4±2°C.
- It is recommended to save any remaining standard until final reports have been sent.

ADDITIONAL INFORMATION

- Due to nature of volatile analytes, the standard must be analyzed **immediately** after dilution.
- The diluted standard will contain all or a subset of the analytes in the required concentration range.

INSTRUCTIONS

- The standard should be brought to room temperature when used.
- Bring a 100 mL class A volumetric flask to volume with volatile free deionized water.
- Carefully open the ampule by snapping off the top at the narrow part of the neck.
- **NEW DESIGN** - transfer exactly **5.0 µL** of the concentrate to the flask using a gas tight calibrated syringe and delivering the aliquot below the surface of the water.
- Mix the solution by inverting the volumetric flask a minimum of three times.
- **Immediately** analyze the diluted sample by your normal procedures.
- Report all results in µg/L.

Please take all necessary safety precautions when handling this product. Phenova products are intended for use by laboratory professionals only and may be hazardous. Buyer/user shall ensure sufficient knowledge, training, facilities and skills necessary to safely handle and store products provided. Material Safety Data Sheets (MSDS) for all Phenova products are available upon request.

Basis	Basis Description
D	Dissolved

The pound sign (#) in the amount added field denotes that the reagent was used undiluted. All calculations are performed using the stated concentration for this reagent.
